

ACOUSTIC MEASUREMENT SENSORS & INSTRUMENTATION

PCB – TRUSTED BY COMPANIES AND LABORATORIES WORLDWIDE

PCB Piezotronics, Inc. provides a variety of acoustic measurement products, including prepolarized and externally polarized condenser, array, probe, low-profile surface, and special purpose microphones. Microphone products are complemented by an assortment of preamplifiers, signal conditioners, A-weighting filters, handheld calibrators, and accessories.

All PCB® acoustic products are manufactured from the highest quality materials. They are used by a variety of industries and customers including automotive, aerospace & defense, OEM's, universities, consultants, white goods (appliance), and consumer goods manufacturers.

Over 50 Years Experience

PCB designs, manufactures, and sells sensors worldwide. With over 1000 employees across the globe, there are several Ph.D.'s on our large engineering staff. These skilled resources enable PCB to offer a variety of products ranging from microphones to accelerometers, force, torque, pressure, load, MEMS sensors, dosimeters, and sound level meters. At PCB, we understand the complexities of your test environment and requirements, therefore we can recommend the best solution for your application.

Innovation

PCB is the inventor of ICP® technology. PCB heavily invests in employees, manufacturing, and R&D equipment. This keeps us a leader in sensor technology. Whether it is introducing the industry's first commercial prepolarized high temperature and first prepolarized low noise microphones, or enabling our business partners to measure the lowest noise level in the world with a custom 3" microphone, you can be assured that PCB is on the leading edge of acoustic design.

1/2" FREE-FIELD PREPOLARIZED MICROPHONE & PREAMPLIFIER

MODEL 378B02

Our most popular model. Ideal for testing in open areas and anechoic chambers

3.15 Hz -20 kHz (+/- 2dB)

TEDS compliant

1/4" ARRAY STYLE PREPOLARIZED MICROPHONES

MODELS 130F20, 130F21 & 130F22

Value oriented for multichannel audible range testing

BNC connector, also available with a 10-32, or SMB connector

TEDS compliant

1/2" FREE-FIELD PREPOLARIZED MICROPHONE

MODEL 377B02

50 mV/Pa

3.15 Hz -20 kHz (+/- 2dB)

15 dBA – 147 dB

IN-HOUSE MANUFACTURING

PCB uses only the highest quality material and components for its microphones. While other sensor providers outsource their manufacturing, PCB has invested heavily in on-going employee training as well as in a state of the art, in-house CNC machining facility. This allows us to control all factors that affect quality and delivery. PCB has made significant investments in our people and operations, including:

High Volume Robotic Machining Cells

PCB's in-house machining facilities control factors that affect quality, production quantities, and delivery. This reduces dependency on outside sources, enables PCB to meet urgent requests, and keeps cost down so savings can be passed through to our customers.

Laser Welding

Microphones are welded in clean areas to ensure stability and robustness.

Anechoic Chamber

This special sound proof room enables our large team of engineers to design, test, and verify acoustic sensors.

Clean Rooms

Assembly is performed in clean rooms to ensure consistency and compliance with Working Class IEC standards. Certified professionals manufacture and assemble all microelectronics in controlled environments.

Environmental Chambers

Environmental stress relieving and testing ensures long term stability in the harshest environments.

Nitrogen Storage Chambers

All critical components and assemblies are stored in nitrogen chambers to minimize contamination and maximize stability.

Laser Etching

Model and serial numbers are etched on the microphone assemblies. Large easy-to-read fonts are on the external housings. Disassembly is not required to read these designations.

Calibration

Every PCB microphone and preamplifier is calibrated with traceable certifications. Some competitors only offer sensitivity readings, typical responses, or certifications of compliance.

Inspection

Every PCB microphone and preamplifier is individually inspected to ensure a quality product gets shipped each and every time.

SELECTING THE RIGHT MICROPHONE

There are several product options to consider when choosing a microphone and preamplifier system to measure sound or unwanted sound, called noise. In some cases, multiple products can be used for the same application. The PCB Microphone Handbook provides detailed information about microphone selection, maintenance, calibration, associated standards, and more. To download this handbook, visit www.pcb.com/acoustics.

MICROPHONE FIELD TYPES

FREE-FIELD RESPONSE

Free-field microphones are designed for use in environments without reflections. They are ideal for outdoor applications, as well as laboratory applications in an anechoic chamber. Common free-field testing includes automotive pass-by, loudspeakers, appliances, and disk drive sound measurements.

Sound Source Location for Noise Reduction

PRESSURE RESPONSE

Pressure microphones are specifically designed to be flush-mounted to a surface at the boundary of the sound field. This allows accurate measurement of sound pressure in ducts, wind tunnels, and couplers. Pressure microphones are ideal for use as reference microphones, as they are designed to have very flat frequency response within a sound coupler or calibrator. Pressure microphones are also required for most ear simulator applications.

Flush Mounted Microphone Measurements in an Impedance Tube

Pressure Response

RANDOM INCIDENCE RESPONSE

Random incidence microphones are designed for use in areas where the sound field could come from any direction. The best uses for these microphones are to perform measurements in reverberant chambers and for many indoor noise applications. They are well suited for room acoustics, as well as for aerospace and automotive cabin noise measurements.

PREPOLARIZED ICP® PRECISION CONDENSER MICROPHONES & PREAMPLIFIERS

Prepolarized microphones have many advantages over externally polarized models. They use low power circuitry and do not require an external polarization voltage. PCB invented ICP® power. Applying a polymer coating to the top of the backplate and embedding a charge on it eliminates the need for expensive 200 V power supplies and cables, and allows use of a 2-20 mA constant current supply or signal conditioner as the power source.

Prepolarized microphones are especially useful in applications that require battery powered equipment. Prepolarized microphones are

less susceptible to the influence of high humidity environments because of the high electrical resistance of the polymer coating on the backplate.

Prepolarized microphone systems use common coaxial cables with BNC connectors and can be shared with other ICP® compatible products including: accelerometers, force, and pressure sensors. Portability and interchangeability with other sensors minimizes test set-up time and reduces the cost per-channel.

ENGINEERED TO MAXIMIZE SYSTEM PERFORMANCE

For optimum performance, PCB matches the microphone and preamplifier to complement each other. The model 378 microphone system series takes the precision and durability of the standard model 377 microphone series line and mates it with one of PCB's model 426 preamplifiers. This system approach provides a convenient and user friendly option for purchasing acoustic measurement equipment and allows for use of TEDS to store calibration data.

PREPOLARIZED ICP® ARRAY MICROPHONES

Prepolarized ICP® array microphones are a cost-effective alternative to the higher end, test and measurement microphones. They are suitable for sound measurements within the normal human hearing range. Array microphones have excellent phase characteristics and can be combined with the appropriate software to effectively map acoustic energy flow. The number of microphones, spacing and predetermined patterns, which are typically dictated by the software and application, allow you to analyze spatial transformation of complex sound fields to understand hot spots. The location of a noise source can be pinpointed and the speed and direction of sound can be determined.

These value-priced array microphones are an excellent choice for large channel count applications such as noise identification, nearfield acoustic holography, sound pressure mapping, acoustic cameras, and beamforming.

All PCB array microphones come standard with Transducer Electronic Data Sheets (TEDS) for microphone identification.

HIGHLIGHTS

- Low Per Channel Cost
- Powered by ICP® Sensor Signal Conditioners
- Integrated Preamp
- Water & Dust Resistant Model Available

EXTERNALLY POLARIZED PRECISION CONDENSER MICROPHONES & PREAMPLIFIERS

Externally polarized microphones were the original standard for all acoustic measurement applications. This design utilizes a separate 200 V power supply and special cables with 7 pin style connectors. Their ease of design enables a large product offering. Externally polarized microphones are typically used to replace microphones in existing systems or when a prepolarized alternative is not available.

PREAMPLIFIERS FOR EXTERNALLY POLARIZED MICROPHONES

Model 426A30 is a rugged 1/2" diameter preamplifier optimized for use with externally polarized microphones. It is compatible with microphones as defined in the international standard IEC 61094, and connects to a 200 V power supply requiring a 7 pin cable with connectors. Model 426B31 is a 1/4" diameter preamplifier with integral 10 ft. cable that terminates with a 7 pin connector.

ADDITIONAL ACOUSTIC PRODUCTS & ACCESSORIES

HIGH TEMPERATURE PROBE MICROPHONE (UP TO 800°C)

Model 377B26 Pre-polarized Probe Microphone is designed for use in difficult measurement situations, such as small cavities and very high temperatures. The acoustic signal is guided to the microphone through a detachable, stainless-steel probe. The high acoustic input impedance of the probe tip minimizes its influence on the acoustic field. Probe microphones are internally compensated to equalize the static pressure at the probe tip with the internal microphone pressure.

IN-LINE “A-WEIGHTING” FILTER

Model 426B02 In-line A-weighting Filter is powered by constant current excitation and is compatible with ICP® microphone preamplifiers. When using this filter, a minimum of 4 mA excitation current is required of the ICP® sensor signal conditioner or readout device which incorporates ICP® sensor power.

SOUND LEVEL METERS

Model 831C is the most recent Larson Davis sound level meter platform. This model provides superior performance, reliability, and 2GB of internal memory. Various firmware modules expand the functionality of Model 831C for a variety of environmental noise and architectural acoustics measurements. The Model 831C also includes the easy-to-use personal health and safety measurement features of other advanced SLM products.

SOUNDTRACK LxT®

The SoundTrack LxT® sound level meter represents a significant advance in performance, reliability, and ease-of-use. This ergonomically designed meter ensures that gathering, analyzing, and presenting detailed workplace and environmental noise data is simple, fast, and accurate.

Please visit www.LasonDavis.com for further details.

ENVIRONMENTAL PROTECTION SHROUDS

Model EPS2116 environmental shrouds are complete weather protection systems for ½" microphone systems. The environmental shrouds are the perfect choice for longer-term measurements in inclement weather. Their special acoustic windscreen material and configuration protect the microphones from rain, sleet, and snow. The shroud seals the preamplifier in a desiccated chamber, thus preserving performance in high humidity environments. The desiccant volume is many times greater than that of inline desiccant cartridges, for lasting protection without interference between the microphone and preamplifier. The shroud is also equipped with bird-spikes to deter winged intruders.

OUTDOOR PREAMPLIFIER & MICROPHONE WITH CALIBRATION CHECK

The Larson Davis PRM2103-FF is designed to be used with the Model 831C sound level meter and an environmental shroud. It can be used in a wide range of weather conditions.

The PRM2103-FF provides a five frequency calibration check which is automatically controlled by the Model 831C sound level meter. It does not require routine maintenance. It includes a built-in humidity and temperature sensor and can automatically turn on an internal heater when there is a risk of condensation. The low power usage makes the PRM2103-FF an excellent solution for battery powered applications.

TURNKEY ACOUSTIC CALIBRATION WORKSTATION

The Precision Acoustic Calibration Workstation Model 9350C is an accurate, turnkey, automated, PC-based system. The 9350C offers efficient and cost-effective calibration of 1/4", 1/2", and 1" microphone cartridges (open-circuit sensitivity), microphone cartridges with preamplifiers (closed-circuit sensitivity), and microphone frequency response function.

The 9350C generates ISO 17025 compliant calibration certificates for:

- Microphone and Preamplifier Calibration
- Preamplifier Conformance Test
- Source Calibration (example: pistonphone)

SERVICES

PCB HAS A "STATE-OF-THE-ART" ACOUSTIC CALIBRATION SYSTEM

All calibrations include test documentation showing the actuator response, corrected responses, the conditions under which the calibration was performed, and the equipment used. Calibrations are performed with reference microphones traceable to national laboratories specializing in acoustic measurements (NIST, PTB, or DFM). PCB's quality system is certified to AS9100:2016 QMS Certified by DQS, Inc. and ISO 9001:2015 QMS Certified by DQS, Inc. PCB's calibration service is accredited to ISO17025 & ANSI-Z540.3 by A2LA (see ILAC MRA) and compliant with ISO10012.

PCB is equipped to calibrate most competitors' microphones and preamplifiers: www.pcb.com/calibration-services

MODEL CAL200

MODEL CAL250

PRECISION HANDHELD ACOUSTIC CALIBRATORS

PCB offers calibrators for microphones that meet IEC 60942 and ANSI S1.40 standards. These units are easy-to-use and available with optional adaptors for use with a variety of microphone diameters. Calibrators are lightweight, portable, and battery operated.

PRECISION CALIBRATORS		
Model Number	CAL200	CAL250
Microphone Sizes	1/4" (6 mm)*, 1/2" (12 mm)	1/8" (3 mm)*, 1/4" (6 mm)*, 1/2" (12 mm), 1" (25 mm)
Frequency	1 kHz ± 1%	251.2 Hz ± 2 Hz
Output Level (re 20 µPa)	94 dB, 114 dB ± 0.2 dB	114 ± 0.1 dB
Barometric Compensation	Automatic	Automatic
ANSI S1.40	Yes	Yes
IEC 60942 Class 1	Yes	Yes

Notes: * With optional adaptors
